Asian Elephant Specialist Group Veterinary Task Force (Dr. Jacob Cheeran, Dr. E. K. Easwaran, Dr. Susan K. Mikota, and Dr. Dennis Schmitt)

May 2009

The figures in the following chart have been calculated based on the formula: Weight in kg = 18.0 (Heart Girth in cm) – 3336. Note that this formula provides only an estimate of weight and has an overall average error of $\pm 8\%$. The average error may be much higher for younger elephants and this formula should be used cautiously in elephants under 13 years of age. This formula is not accurate for African elephants. It is preferable to obtain scale weights whenever possible.

For further details see: Hile, E.M., Hintz, H.F. and Hollis, N. 1997. Predicting body weight from body measurements in Asian elephants (*Elephas maximus*). *J Zoo Wildl Med* 28(4):424-427

Heart Girth (cm)	Weight (kg)	Heart Girth (cm)	Weight (kg)	Heart Girth (cm)	Weight (kg)
